### Mass Alien Abduction Experiment in Los Angeles

**Many were contacted by “aliens” during an experiment conducted by the OOBÉ Research Center. It was the first experiment to ever prove that close encounters with UFOs and extraterrestrials are a product of the human mind.**

**Los Angeles, October 31, 2011** - 20 volunteers assembled in Los Angeles on October 7th, 2011. They were instructed to perform a specific procedure upon overnight and early-morning awakenings over the next few days. More than half of the volunteers experienced at least one full or partial out-of-body experience as a result. 7 of them made visual contact with UFOs or extraterrestrials. Meanwhile, the sensations they described were identical to those of accounts by “alien abduction survivors”. By some estimates, up to one million Americans experience such encounters every year.

According to the researchers, the term “out-of-body experience” is used to refer to the sensation of having left the body, and not a real exit of some essence from the physical body - although this is just the impression often had by test subjects.

The fact that UFOs and extraterrestrials may be deliberately encountered in a controlled manner and within a few days proves that such experiences are a product of the human brain. Experiment author Michael Raduga explained, "We tried to right a common misconception with this experiment - the issue at hand isn't extraterrestrials, but hidden human abilities. If you've encountered UFOs or aliens after sitting or lying down, it can now be unequivocally stated that you've had a spontaneous out-of-body experience. We have proven this."

It has long been theorized that encounters with extraterrestrials are nearly always the result of spontaneous out-of-body experience. However, scientific proof would have to wait until the discovery of methods for inducing the out-of-body state. In September 2007, the OOBÉ Research Center started to conduct hundreds of experiments on thousands of people in 5 countries. That work resulted in the development of a procedure allowing anyone to have an out-of-body experience within the first several attempts. This procedure in turn allowed for the OOBÉ theory of extraterrestrial encounters to be tested and proven correct. The experiment was led by Michael Raduga, founder and head of the

OOBÉ Research Center, as well as the author of 10 published books, the best-known of which is *School of Out-of-Body Travel. A Practical Guidebook*, freely available online.
